NARVA Launches Flush-Mounted Slimline Marker Lamps

Automotive and transports lighting specialist NARVA has introduced a new ultra-slim L.E.D marker lamps that can be flush-mounted resulting in a total thickness of just 9.5mm.

The super-stylish Model 17 L.E.D Flush is ideal for modern truck and trailer applications in the New Zealand transport sector, as well as a wide variety of other larger vehicles.

The new marker lamp achieves its slim mounting with a standard 13mm hole required for the cable entry. The 0.5m hard wired cable is sheathed and a foam gasket is integrated into the rear of the lamp to seal the lamp's cable entry and secure a neat installation.

Incorporated into the lens are 'E' and ADR approved retro reflectors that overcome the need for extra reflectors when used in accordance with ADR 13 installation requirements.

NARVA[®] *Press Release*

NARVA makes its Model 17 lamps available in various colours, including Amber (side marker), White (front end outline) and Red (rear end outline). All lamps feature multi-voltage circuitry and virtually unbreakable polycarbonate lenses.

Ideally suited to applications on refrigerated transport vehicles where the maximum width of the vehicle is critical; buses; caravans; recreational vehicles etc, new Model 17 NARVA marker lamps are sold in attractive retail blisters or in bulk packs from leading automotive outlets throughout New Zealand.
