NARVA's Elegant Down Lights Enhance Modern Interiors

Interior lighting for caravans, mobile homes and boats has become just as style-driven as our family homes.

To keep ahead of trends, leading automotive and marine lighting specialist NARVA has introduced two new stylish brushed-metal halogen down lights complement the interiors of modern caravans, motor homes and boats.

Delivering a warm, radiant light through a frosted glass lens, the new models offer an air of sophistication to the interior layout with their modern styling and flush mounting finish.

The pre-wired 12 Volt lights are available in 10 and 20 Watt outputs and include linear spring clips for quick and secure snap-in fitment. The frosted glass lens is removable for easy globe replacement.

The hole required is just 50mm with a depth of 19mm and the attractive brushed-metal flange extending to 73mm in diameter, ideal for the limited space cavities often found in caravan, mobile home and boat ceilings.

Available from leading automotive outlets, the new NARVA halogen down lights come individually box packed or in attractive retail blister display packs and are very competitively priced.
