### New Rugged L.E.D Work Lamps From NARVA

New levels of performance and ultra reliability in rugged LED work lamps have been set with the release of the new Narva 'Delta' work lamps, now on sale in New Zealand.

Designed for the demanding workplaces, the new 'Delta' lamps adopt tough LED technology and construction to withstand the harshest environments. This includes a fully sealed die-cast aluminium housing; polycarbonate lens; hard-wired and sealed cable entry plus a 4mm steel heavy-duty mounting bracket that allows the lamp to be tilted 30 degrees up or down from the vertical position.

The 'Delta' LED work lamps produce 2000 lumens of whiter light in a powerful and focussed beam, which is ideal for forward illumination. NARVA says the performance of the lamp is outstanding and offers increased safety with less eye strain over longer periods of use.

The lamps are multi-voltage 9-to-36 volt units and have a low current draw of just 1.75 amps at 12 volts and 0.85 amps at 24 volts, making them suitable for a wide range of applications performance and durability is a must, including quarrying, roading, contracting, agriculture, forestry and search and rescue.

With long life of 50,000 plus hours, impact and vibration resistant rugged construction, the new series of IP68 rated work lamps are also covered by NARVA's 5 year LED warranty.

NARVA 'Delta' LED Work Lamps with a Long Range Spread Beam (Part No. 72467) or Flood Beam (Part No. 72466) are now available from leading automotive accessory outlets throughout New Zealand.
