Heavy Duty Junction Box From NARVA

A heavy-duty junction box from NARVA makes it easier for commercial transport and automotive workshops to bullet-proof the wiring on trucks, trailers and heavy construction/mining/forestry equipment.

The NARVA 8-way / 12-port waterproof junction box is being released in an ever-increasing range of demanding commercial applications in New Zealand.

Designed and built for use specifically on trucks, trailers and large equipment, the new junction box has a housing constructed of durable ABS plastic with 12 pre-tapped cable entry points and a clear, virtually unbreakable polycarbonate cover for easy inspection.

NARVA[®] *Press Release*

A silicone gasket within the lid seals the unit against the ingress of moisture and corrosive elements with a tight waterproof fit secured by six fixing screws.

The 8-way junction box has a 50A per circuit amperage rating and is supplied with six filler plugs. A selection of five compression fittings are available as accessories, to suit differing cable diameters ranging from 9.5mm to 19mm and with 3mm and 4mm flat trailer cables.

Mounting the junction box has been simplified by providing two eyelet reinforced holes at each end of the housing.

The NARVA Waterproof Junction Box is available from leading automotive and transport outlets throughout New Zealand under Part No. 57850. More information is on the www.narva.co.nz website.
