Style and performance of the Narva 225 driving lamp further enhanced

One of the world's best driving lamps has just got even better, with a series of updates made to the NARVA Ultima 225 Driving Lamp, which is now available in New Zealand.

For the past two years the NARVA Ultima 225 has set the standard for styling and performance.

The new lamp was the culmination of more than three years research and development by NARVA and leading Swedish automotive design and lighting experts. NARVA's expertise played an important part in this development ensuring it would stand up to the harsh environments found in New Zealand and Australia.

Now, as a result of Narva's continuous improvement policy the Ultima 225 driving lamp takes excellent performance to an even higher level.

NARVA[®] *Press Release*

All options of the lamp such as standard Halogen; Halogen Blue plus the Xenon High Intensity Discharge (H.I.D) in 12 and 24-Volt versions have been upgraded to incorporate additional strength, safety and mounting features.

Major developments to the lamp's extra tough glass reinforced polymer housing allows the ballast on the H.I.D version to be accommodated internally. This provides additional safety, protection against the elements and saves additional mounting.

The design team has also further improved the best-in-class mounting system with enhanced stability coupled with versatility and ease of fitting. Bolt holes on the bracket have been repositioned to enable them to be reversed, allowing improved forward and aft movement to suit a variety of applications on 4WDs, trucks, coaches and off-road vehicles. An 8mm interlocking spacer block has been added to provide improved height adjustment for various mounting platforms and additional strength is built into the glass reinforced housing with a special aluminium 'crush tube' inserted to give extra strength and stability.

Completing the upgrade, snap-fit bracket caps have been fitted providing increased security against theft or tampering, which helps to lift the styling of the lamps.

Packaging for the upgraded Ultima 225 lamp range has also received some major attention from NARVA's industrial design team with impressive results that make the lamps stand out on retail shelves.

The updated NARVA Ultima 225 driving lamp range is now going into automotive accessory outlets throughout New Zealand.
