NARVA Launches Ultimate Lighting Kit For Boat Trailers

[Printer friendly version here](#)

Boat ramps can be a brutal environment when launching and retrieving vessels off a trailer, with breaking waves, constant jostling for position among other boaties and the heavily corrosive environment exacting a heavy toll on delicate items such as trailer lights.

So it's about time someone introduced a set of trailer lights built to stand up to the hard life on the launching ramp. Well, NARVA just has.

Using advanced LED technology, virtually unbreakable polycarbonate plastic, stainless steel fittings and sonically sealed construction, NARVA has released the ultimate rear combination lamp for a wide range of vehicles and trailers in New Zealand.

Capitalising on the recent success of its Model 42 L.E.D lamp, NARVA has added nine metres of sheathed tin coated copper cable, hard wired and sealed into two of these technically advanced rear combination lamps to produce its newest product. These have been combined with an L.E.D licence plate lamp also featuring nine metres of hard wired cable.

By hard wiring and sealing the cable into the waterproof lamps with no break in the connections right up to the towing vehicle's electrical connection, NARVA has eliminated every trailer boat user's greatest concern of water ingress and corrosion resulting in lamps that don't work.

The combination of superior sealing methods with the reliability of L.E.D results in the latest Model 42 kit being considered as the ultimate choice in submersible boat trailer lighting

Designed on the footprint of Australasia's most popular rear combination lamp - the Model 42 - with dimensions of 273 x 92mm and a depth of just 35mm, allows for easy fitment to a wide variety of trailer types.

All three lamps in the kit are fully ADR compliant and suitable for 12 or 24Volt applications, being multi-voltage 9 – 33 Volt.

The complete NARVA submersible trailer lamp kit comes in a full colour carton under the part number 94206TP and is available from selected marine and automotive accessory outlets throughout New Zealand.
